

1 **ABSTRACT**

2  
3 Described herein is a technology for dynamic and robust detection of one or  
4 more embedded-signals (e.g., watermark, copyright notice, encoded data, etc.) in  
5 an input signal (e.g., multimedia stream, video stream, audio stream, data, radio,  
6 etc.) within a multi-signal environment. This abstract itself is not intended to limit  
7 the scope of this patent. The scope of the present invention is pointed out in the  
8 appending claims.
